

K-Lift LV125

When you want to lose weight but still need height and reach, the answer has to be the K-Lift LV125.

Despite a GVW of just 3,500kg the K-Lift LV125 is no lightweight in terms of powered access platforms. Combined with an impressive working height, a broad outreach and a generous payload, it has the capability to provide safe access in a wide range of situations.

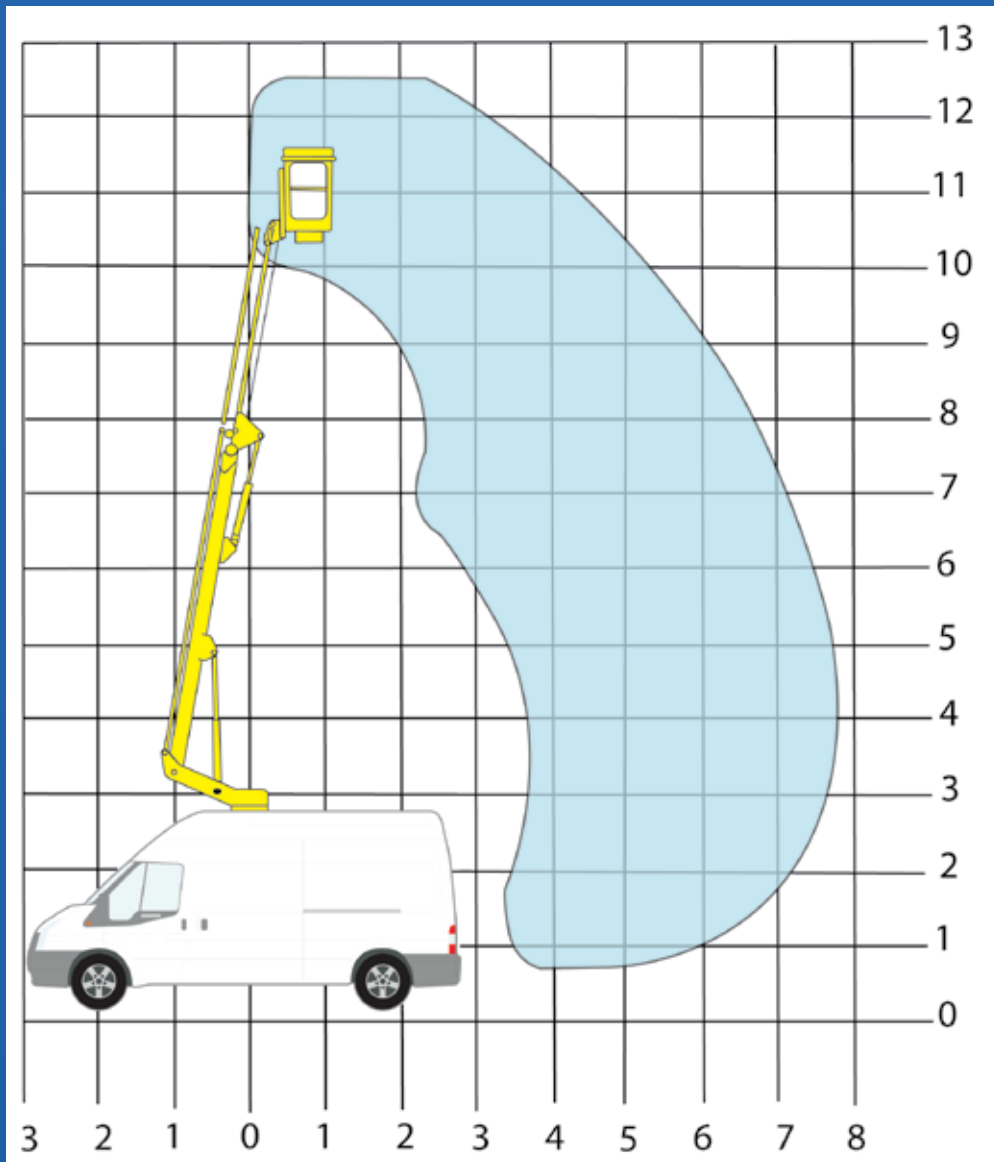

Working height: 12.5 metres
Outreach: 7.7 metres
GVW: 3,500 kg
Basket payload: 230 kg
Platform rotation: 360° non continuous

K-Lift LV125: light - but no lightweight

12.5 metres

K-Lift Streetmaster platforms have a reputation for handling access and weight far above expectations. The LV125 is no exception.

Based on a high roof, LWB Ford Transit the platform has a generously sized basket, taking two people with ease via walk-in access from the nearside. The impressive basket payload of 230kg gives it the capability to lift both men and materials up to 12.5 metres and out to 7.7 metres; with a full tank of fuel the LV125 can handle a payload of up to 400 kg, making it one of the most effective access platforms in its class.

The compact footprint and manoeuvrability of the base vehicle gives access to even the tightest of spaces while the lift is fully controllable from the basket, making life safe and comfortable for its occupants. Importantly, the vehicle can be handled by any licensed driver, without the need for additional qualifications, giving you the freedom to schedule your team without restriction.

When you need to lose weight but not reach and height, call Powerlift UK and test drive the remarkable K-Lift LV125.
